What Happens at Each Visit?

This poster will show you what to expect at each visit from pregnancy to your child’s 3rd birthday.

Pregnancy

■ In early pregnancy, you will be given a backpack to wear while you are in this study.
■ You will receive a dust collection kit to use at home for 2 weeks to measure air pollution. Put the air monitor back in the backpack you wore during pregnancy.
■ You may be asked to collect samples of urine, blood, and the fluid from your child’s intestines.
■ Home dust sample
■ Blood sample
■ Urine sample
■ Bowel movement sample

Birth After Delivery

■ If we see a common health problem in the group, answers about that problem will be shared with many test results from hundreds of people. Test results about one person do not tell us much about your child.
■ We will continue regular visits to your family doctor while you are in this study.
■ Answers for All Children in the Study
■ Answers for You and Your Child

Office & Home Visits

1. Ask your baby’s doctor to test your baby’s blood for lead when your baby is 1 and 2 years old.
2. If the doctor tells you that your child might get lead poisoning, have your child tested every year until 6 years old.
3. If you are told that your child has lead poisoning, your child will be followed by a special care team.
4. Tell your landlord and/or HPD* about peeling paint at home. Your landlord is required by law to fix the problem.
5. Be sure to also ask for TEST RESULT: TESTING YOUR BABY FOR LEAD IS VERY IMPORTANT AND IT’S THE LAW.
6. Remember to ask your child’s doctor to test for lead.

In-hospital Visit:

1. Small blood sample from child’s arm
2. Blood sample from baby’s arm
3. Blood sample from your arm
4. Urine sample from your child
5. Urine sample from your arm
6. In-hospital dust sample
7. Blood sample from your arm
8. Blood sample from your arm

Office Visit

1. Measure baby
2. Test baby’s development
3. Test child’s development
4. Weigh you
5. Test child’s development
6. Weigh you

What should I do for my baby’s high blood lead level?

1. Call your child’s doctor.
2. Get special care that can help your child grow healthier.
3. Keep your child away from lead hazards.
4. Take your child to a special services if needed.

Home Visit: Pregnancy

■ You will receive individual results
■ How is my child breathing? Are the lung problems like breathing, learning about all the children in the study.
■ What did you find in the dust you collected from my house? Other children in the study?
■ Answers about the whole group of children, you answers about your own child’s health.

Some answers from the study will help you.

Answers for You and Your Child

■ Special services if needed
■ How do pesticides make children sick?
■ Does secondhand cigarette smoke make children sick?
■ How can cockroaches and mice at home make children sick?
■ What’s in your home dust that can harm children’s health?
■ How can your baby’s behaviors be affected by air pollution?
■ What did you learn about the air pollution in this study?
